Vancouver, B.C., Canada, V6B 2P4

Hello!

We briefly met at the Penny Arcade Expo, and spoke about employment opportunities at the **humanature** studio.

I'm currently a 4th year Computing Science student at Simon Fraser University. I've completed three co-op semesters, working with MovieSet.com, Research in Motion, and Electronic Arts.

If you're not familiar with the SFU co-op program, it allows for talented University students to work directly with companies in their chosen industry for 4-8 months- and a chance for the industry to find great talent.

In my time as a software developer with Research in Motion, I was called upon to automate a number of difficult or repetitive tasks, then tie all of those scripts together with a convenient web interface- working with major database technologies, Perforce, and PHP.

At Electronic Arts, I worked with the Buildworks team to produce a .NET/SOAP web-services framework and companion software to share build data with developers.

In my spare time, I try to develop my skills in any way that I can- I've concentrated heavily on web development, learning my way around a Linux environment, Python, Javascript, and a number of other peripheral technologies.

While I'm a software nerd most of the time, I've also spent a lot of time learning about visual design and user-interface principles. I've spent time working on cartooning and layout with SFU's Peak newspaper and acting as a Teacher's Assistant for SFU's course on interaction design.

If you would like to speak with me further, or set up an interview, please send me an e-mail at **curtis@lassam.net**, or call me on my cel at **778.908.8409**.

Thanks for your time!

- Curtis Lassam

Curtis Lassam

he's a man who has a resume. who doesn't love a resume?

Technology

PHP	Apache
Python	Photoshop
JavaScript	Illustrator
C/C++	InDesign
C# (.NET)	MySQL
XHTML/CSS	MSSQL
Perforce/svn	PostgreSQL

Work Experience

Electronic Arts - Summer Semester, 2008

Software Developer - BuildWorks

- Planned, architected & developed a web service solution in .NET and SOAP.

Research In Motion - Fall Semester, 2007

Software Developer - Tools

- Took a utility tool in development, heavily refactored the codebase, and added several new modules.
- Automated time-consuming tasks with PHP, various APIs, and an assortment of databases- Oracle, MySQL, MSSQL, and PostgreSQL.

MovieSet Inc. - Fall Semester, 2007

General Lackey

- Managed such high-profile tasks as documentation, fixing small bugs, keeping the office internet working, fixing the CEO's e-mail, and lunch.

TA - CMPT 383 - User-Interface Design

TA - TECH 101 - Teamwork & Communication II

Simon Fraser University

Currently enrolled in SFU's Computing Science program- with courses this semester on Distributed Systems, Artificial Intelligence, & Animation. Available for a 4-8 month co-op term starting in January. Estimated graduation date: December 2009.
